* 6th grade survey did not ask these questions.

^ Variations in the number and order of these response options may affect year-to-year comparisons. Two response options are new in 2007.

** Body Mass Index (BMI) is a number calculated from a child's self-reported weight and height. BMI can be used as a screening tool to identify possible weight problems for children and teens. The BMI number is calculated using a standard formula. BMI-for-age percentiles are used to interpret BMI numbers because, unlike adults, BMI is both age-and sex-specific for children and teens. The CDC BMI-for-age growth charts take into account these differences and allow translation of a BMI number into a percentile for a child's sex and age. The CDC growth charts were used to determine weight status according to BMI for participants in the Minnesota Student Survey. New questions in 2007.

Not overweight: Less than the 85th percentile

At risk of overweight: 85th to less than the 95th percentile

Overweight: Equal to or greater than the 95th percentile
