

Minnesota Department of Health Project Firstline Diarrhea Education Bundle

Diarrhea is liquid stool and is full of germs. Diarrhea can be caused by a lot of things, but it is sometimes a sign of a pathogen that can cause illness, even in healthy people. Infections that cause diarrhea spread because germs move easily between hands, equipment, and surfaces in health care. Some of these germs can be difficult to kill. Common examples of infections that cause diarrhea include *C. difficile*, norovirus, and rotavirus (especially in children).
