

## 2017-18 Child Care Immunization Report Summary

### 2017-18 response rate

For the 2017-18 reporting year, 1,419 of 1,721 (82.5%) child care centers submitted a child care immunization report to MDH. There were 67,457 children age 24 months or older who were included in these reports.

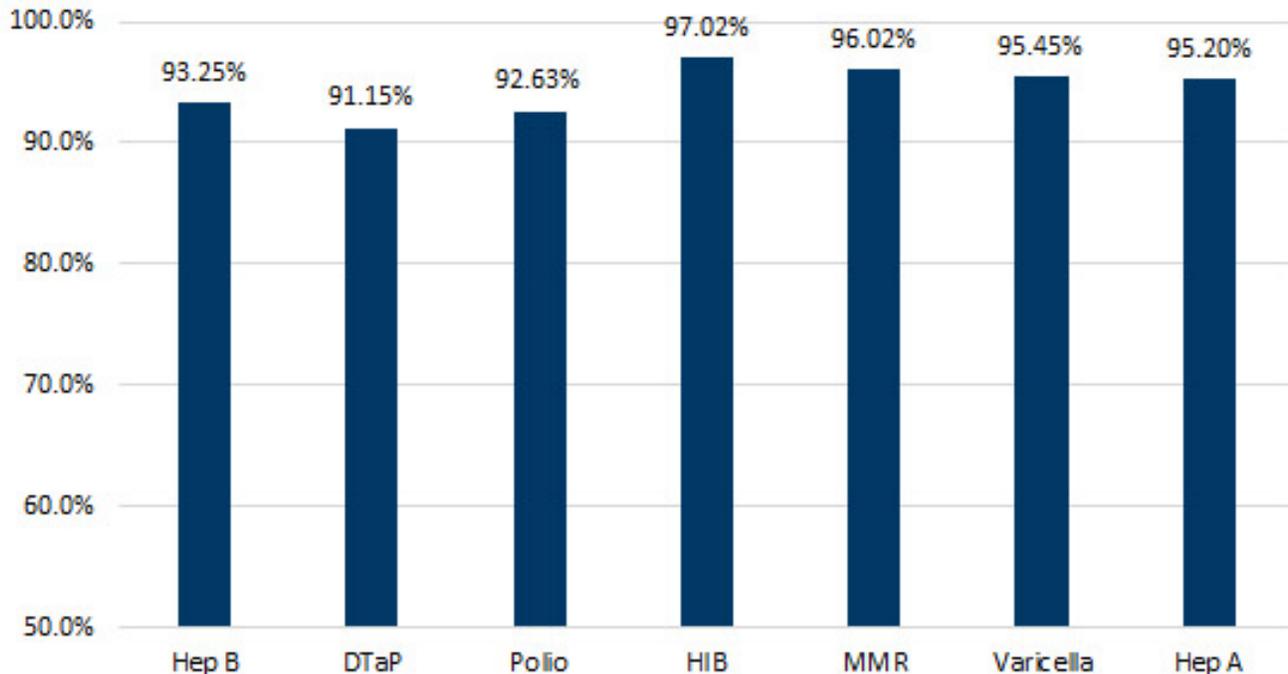

Child care immunization reports include hepatitis B, diphtheria, tetanus, and pertussis (DTaP); polio; measles, mumps, and rubella (MMR); haemophilis influenzae type B; varicella (chickenpox); and hepatitis A vaccines.

This table shows the number of required doses for children age 24 months and older.

Age	Hepatitis B doses	DTaP doses	Polio doses	HIB doses	MMR doses	Varicella doses	Hepatitis A doses
24 months and older	3	4	3	1 <sup>a</sup>	1	1 <sup>b</sup>	1 <sup>a</sup>

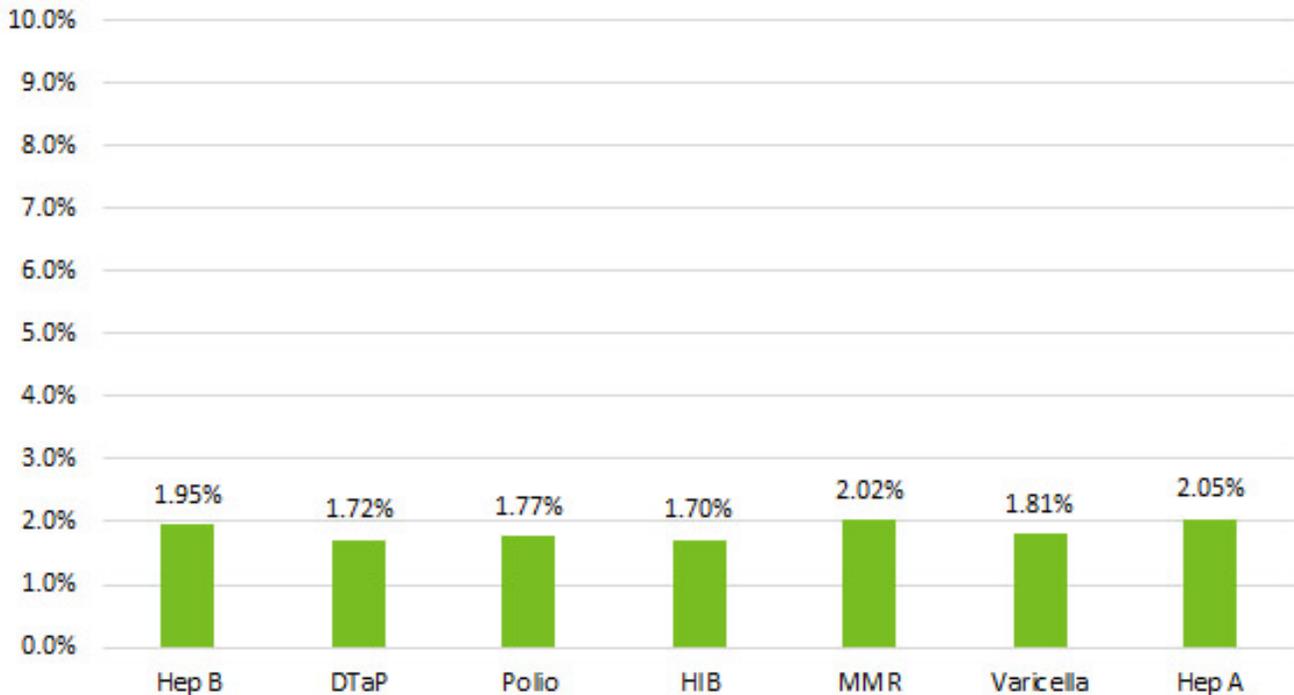

### Immunization percentages for child care

Percent of Minnesota child care enrollees age 24 months and older who are fully immunized, by vaccine type

## Non-medical exemption percentages for child care

Percent of Minnesota child care enrollees age 24 months and older with a non-medical exemption, by vaccine type

a. The requirements differ from the immunization schedule recommended by the Advisory Committee on Immunization Practices (ACIP) immunization schedule. The above requirements are the minimum number of doses that are required for enrollment in child care, but to be fully protected children should receive additional doses for Hib and Hepatitis A. Please refer to [Vaccines for Infants, Children, and Adolescents \(https://www.health.state.mn.us/people/immunize/basics/kids.html\)](https://www.health.state.mn.us/people/immunize/basics/kids.html) for the complete childhood immunization schedule.

b. If the child has had chickenpox disease, varicella shots are not required. If the disease occurred after Sept. 1, 2010, the child's doctor must sign a form.
